ARAMOZEN AI PORTAL PROPOSAL

A Secure AI Solution for Your Fragrance Manufacturing Team

Presented by: Pranav Rao K

Why Shared AI Accounts Are Risky

1. Security Vulnerabilities

When multiple employees share a single AI login, there is no barrier preventing unauthorized access to sensitive fragrance formulas, supplier data, or business strategies entered into the chat.

2. No Accountability

Shared accounts make it impossible to track who sent which query. If confidential data is misused or leaked, Aramozon has no audit trail to identify the responsible party.

3. Data Leakage Concerns

AI models can retain and surface information across sessions. Proprietary fragrance compositions or client details typed by one employee may inadvertently appear in another user's session.

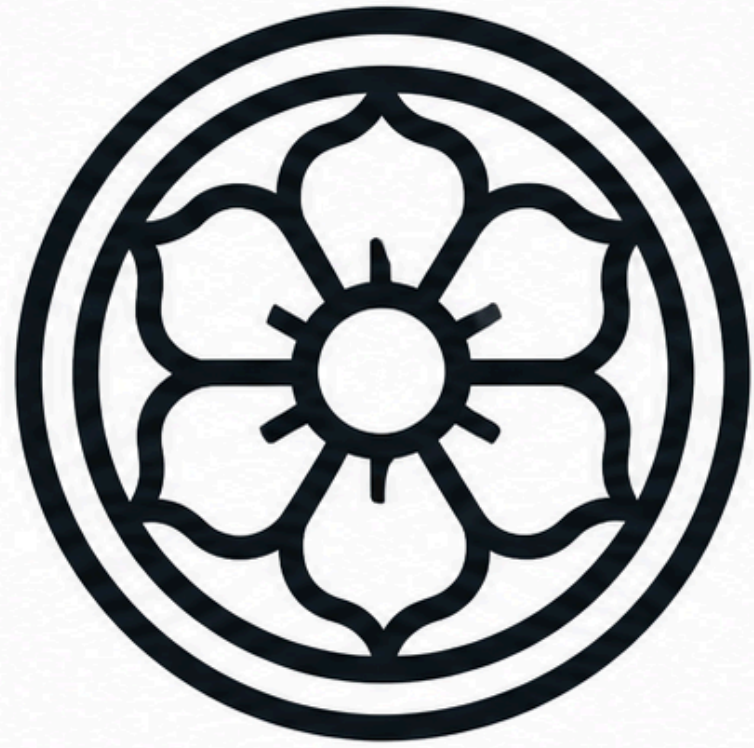

What Is a Company AI Portal?

A Centralized, Secure AI Access Platform

A Company AI Portal is a private, centralized platform that gives your employees controlled, secure access to AI tools - without sharing personal accounts or exposing sensitive business data to third parties.

Think of it as your organization's own gateway to AI: one login environment, one set of rules, and full visibility for the owner. Every query is routed through your portal, keeping your fragrance formulas, client data, and business intelligence protected inside Aramozon's ecosystem.

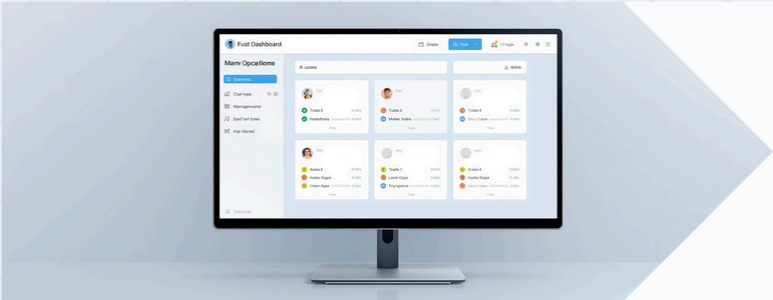

AROMAZEN AI

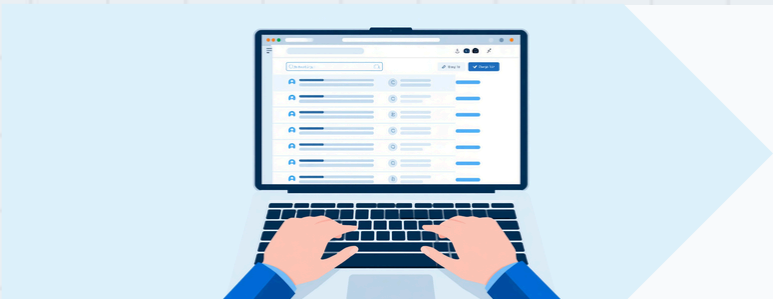

A PORTAL TO SMARTER BUSINESS

Owner Dashboard & User Permissions

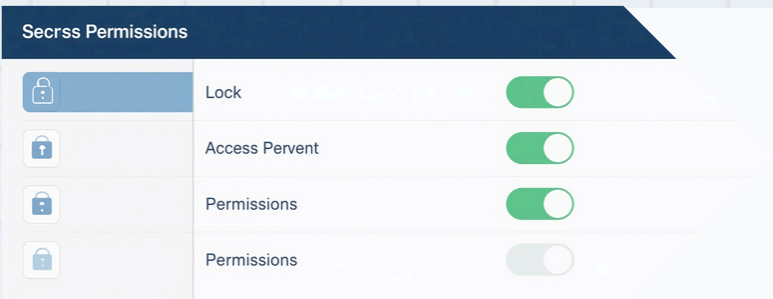

Role-Based Access Control

Assign distinct roles - Admin, Manager, and Staff - so each Aramozon employee accesses only the AI tools and data relevant to their function.

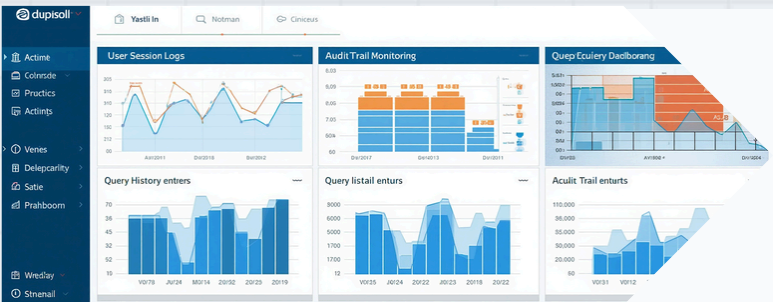

User Management Console

Add, suspend, or remove employee accounts instantly from a central dashboard, with no dependency on third-party AI platform support teams.

Granular Permission Levels

Control which AI models, prompt templates, and data sources each user or team can access, preventing unauthorized use of sensitive fragrance R&D data.

Activity Monitoring & Audit Logs

Track every query, user session, and model interaction in real time, giving the Aramozon owner full visibility and compliance-ready audit trails.

What the Admin Can Track & Control

Usage Analytics

Monitor which employees are using the portal, how frequently, and what types of prompts are being submitted across all departments.

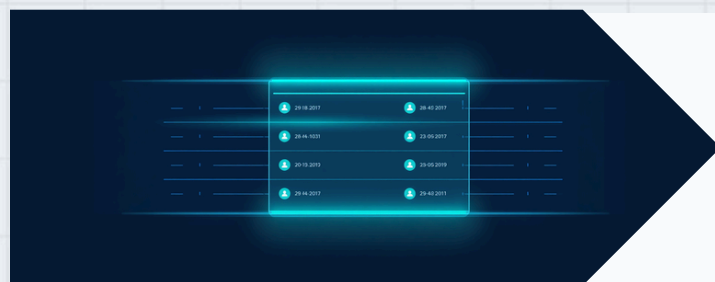

Cost Monitoring

Track real-time API token consumption and spending per user or team, with monthly budget caps and automated alerts to prevent overspend.

Content Policies

Set and enforce guardrails on what topics or outputs are permitted, ensuring all AI interactions align with Aramozon's brand and compliance standards.

Access Logs

Maintain a complete audit trail of every session and interaction, enabling full accountability and the ability to review or revoke access instantly.

Why Better Than GPT/Claude Team Plans?

Feature	Our Custom AI Portal	GPT/Claude Team Plans
Individual Employee Login	✓	✓
Owner Dashboard & User Management	✓ Complete Control	✓ Basic Admin Controls
Department-wise Access Control	✓ Sales, QC, R&D, Finance, etc.	✗ Not Available
